

KKEVO Tech company formation and Kkevo Family board decisions

Document KKT GOV 001 | Version 0.1 | 5 October 2026 | Confidential | Proposed for approval

KKEVO Tech is not yet registered. The founders must establish the company, document ownership of Kkevo Family, and approve its data practices before a public release. This pack supplies proposed policies, working legal instruments, operating procedures and records for that process. It does not record completed incorporation, regulatory approval or a decision to launch.

The decision requested

Approve preparation of a Cameroon company and a restricted Kkevo Family launch program, subject to counsel validation, registration, the required data-processing permissions, funded operations and the release evidence in document 07. App development may continue with synthetic records while these conditions are resolved. Real family records must not be moved into an unapproved production service.

The term board means the founders' oversight group until the chosen legal structure establishes its powers. If a SARL is selected, shareholder decisions and the legal manager retain their statutory powers. An internal committee cannot confer legal existence on the company or replace decisions reserved to shareholders. The manager must execute contracts and filings within valid authority.

The document set

Code	Document	Decision or use
00	Board decisions and company formation plan	Approve scope, appointments, funding and conditions
01	Cameroon company registration dossier	Select legal form and complete founder instruments
02	Data governance and processing assessment	Validate data permissions, inventory, risk and retention
03	English and French user notices and terms	Approve accurate notices before publication
04	Data rights and family content procedures	Operate corrections, reports, erasure and disputes
05	Security and incident procedures	Establish controls, response and recovery
06	Supplier and personnel agreements	Contract for controlled access and asset ownership
07	Board registers and release acceptance	Maintain evidence and approve or defer release

Confirmed starting position

Kkevo Family is the Android product intended to launch under KKEVO Tech. Cameroon is the registration country; Central Africa is the intended market region. The recommended first territory is Cameroon, followed by individually approved country entries. No specific regional expansion country is approved by this pack.

The existing app supports private family trees, recorded ancestor suggestions, invitation requests and owner approval, shared profiles, relationships, stories, portraits, JSON transfers, account recovery, content reports and pending deletion requests. Its viewing permissions cover the whole tree rather than a named branch. Account erasure is not yet implemented. Production hosting, real email delivery, public policy resources, support operations and a signed physical-device pilot remain outstanding.

Legal review priorities

The official Cameroon law makes consent, minors, processing authorization, transfers, security, rights and post-mortem processing material to this product. In particular, sections 9, 19, 22, 29, 30, 32, 33, 38, 45 and 48 require targeted review. Section 36 also raises a classification question for matching across family records. The board must obtain a written assessment of whether the present model can operate lawfully, what permissions are needed and which data must be excluded. Do not assume European contractual or legitimate-interest grounds apply in Cameroon. Do not import a European 72-hour breach clock; section 22 uses immediate notification. Confirm implementing instruments and authority submission channels. [Official Cameroon personal data law](#)

Formation and launch sequence

Phase one founder decisions

Name a formation coordinator and independent counsel. Confirm legal name availability, founders, beneficial ownership information requested by authorities or the bank, legal form, registered office, capital, share allocation, manager, financial year and funding. Prepare an asset inventory covering code, domains, logos and third-party licenses. Obtain counsel's opinion on the family-data model before collecting real records.

Completion evidence: signed founder decisions, completed company particulars, lawyer engagement, approved formation budget and the legal assessment request in document 02. A trade name or website does not establish incorporation.

Phase two registration

Validate document 01 with counsel and the competent Centre de Formalités de Création d'Entreprises or registry. Obtain the current official forms, signature/authentication route, capital evidence, copy count, publication requirements and fee quotation. Sign only completed, verified instruments. The authorized formation representative files the dossier and records receipts and any correction requests.

Completion evidence: registration extract, verified legal particulars, tax registration evidence and any other outputs confirmed by the competent authorities. Maintain a separate record of employer obligations when employment begins. No fixed registration duration or fee is promised here.

Phase three company operational setup

Open company financial and service accounts, transfer or license pre-existing assets under document 06, and formally assume approved pre-incorporation commitments where legally permitted. Appoint accountable operations, security, privacy and support leads. Configure professional support and privacy contacts, secure company credentials, procurement authority, bookkeeping and records storage.

Completion evidence: executed asset instruments, account custody record, appointment letters, accounting engagement, signed supplier agreements and access register. Review protection of the company and product names through OAPI separately from incorporation.

Phase four permission and implementation

Finish the data inventory and impact assessment; obtain required authorizations and written advice on outstanding regulatory process questions. Approve the provider locations, consent evidence, living-

relative records, minors, deceased records and matching model. Implement the accepted rules in the API and app, including actual erasure, notice acceptance and operator procedures. Populate and verify the public notice fields.

Completion evidence: legal sign-off, authority receipts/authorizations where required, completed inventory, operational controls and demonstrations that notices describe actual behavior. A vendor contract alone is not transfer authorization.

Phase five controlled launch and continuing oversight

Complete signed release testing, an off-device restore, incident and deletion exercises, and a consenting family pilot. The legal manager and authorized decision body review document 07 before approving a gradual Play release. Regional expansion repeats the country assessment, support, language, vendor and permission review.

Role appointments for approval

Role	Accountability	Proposed appointee
Formation coordinator	Complete registration and custody of formation records	[Name]
Legal manager or lawful representative	Sign within authority and ensure funded operations	[Name]
Privacy lead	Maintain inventory, permissions, rights cases and notices	[Name]
Security and operations lead	Access control, incidents, backups and release evidence	[Name]
Support and content lead	Triage reports, corrections and appeals	[Name]
Board secretary	Minutes, approvals, conflicts and action tracking	[Name]

Privacy lead is an internal appointment. Counsel must determine whether a statutory officer or other formal appointment is required. Roles may be combined, but high-risk deletion, privileged access and payment decisions need a second reviewer. The board must appoint a deputy or external reviewer when staffing is limited.

Proposed funding authorization

The founders authorize a ceiling of [amount XAF] for legal and registration preparation, [amount XAF] for hosting and mail, [amount XAF] for security/legal assessments and [amount XAF] for support and pilot operations. No spending authorization is effective until the decision is signed by persons with authority. Quotes, statutory capital, formation fees, recurring expenditure and reserves must be recorded separately.

Proposed resolutions

R01 Formation: The founders approve pursuing [legal form] under the proposed name [legal name], subject to availability and counsel validation. [Name] is authorized to prepare the dossier within the approved budget. Filing and representation powers are defined in document 01.

R02 Ownership: The founders direct preparation of an asset register and appropriate assignment or license of Kkevo Family to the incorporated company. The resolution does not transfer relatives' personal data or assign third-party copyrights.

R03 Governance: The lawful decision body appoints the roles above, adopts the committee charter below and approves the eight documents only after their individual approval records are completed. Proposed text does not become effective through circulation alone.

R04 Data conditions: No real production family-data processing or overseas transfer may start until the privacy lead records the lawful route and required permissions. Unresolved living-person, minor, deceased-person or interconnection issues require the relevant workflow to remain excluded from a real-data release.

R05 Release: Public release remains deferred until the documented acceptance conditions are met. Marketing may not claim production readiness, encryption properties, uptime, approvals or family verification beyond the available evidence.

R06 Expansion: Each additional country, new data use, new provider location or material sharing change requires a recorded legal and operational assessment before approval.

Decision body [Founders / shareholders / lawful board]. Meeting date [date]. Present [names]. Notice/quorum/authority [verified basis]. Votes and abstentions [record]. Conflicts and recusals [record]. Approved resolutions [IDs]. Conditions [record]. Chair [signature]. Secretary [signature]. Counsel review [name/date/reference].

Internal oversight committee charter

The committee reviews product purpose, data risks, expenditure, operational performance and release evidence. It receives a monthly report during formation and pilot, and a proposed quarterly review thereafter. Extraordinary meetings are convened immediately for suspected unlawful processing, serious incidents or material safety concerns. This cadence is a company proposal, not a statutory meeting calendar.

Members disclose conflicts before decisions, avoid accessing real family records for board reporting, and receive aggregated metrics or redacted case summaries. Decisions name an owner, deadline, conditions and proof of completion. Internal approval does not displace legal manager/shareholder duties or regulator authority. Records remain access-controlled and subject to approved retention and lawful holds.

Source and review register

Sources checked on 5 October 2026. Counsel must recheck current requirements before execution.

KKEVO Tech Cameroon company registration dossier

Document KKT REG 001 | Version 0.1 | Confidential | Founder instruments for counsel review

The founders must select and register a legal entity before presenting KKEVO Tech as an incorporated company. This dossier contains a formation brief, a proposed SARL articles instrument in French, and supporting founder forms. It is not an official registry form, a certificate or proof that capital has been paid. Missing particulars must be completed and the instruments adapted by Cameroon counsel before signature.

Legal form decision

A SARL is the working option for a small operating company. A SAS may merit review if founders require more flexible investor or governance arrangements. An SA is not assumed merely because the founders want a board. Counsel must compare governance, capital, shareholder count, contributions, costs, liability and fundraising plans. If the selected form is not a SARL, replace the articles below rather than altering its title only.

For a SARL, the internal oversight group described in document 00 advises and reviews. Legal management and shareholder powers follow the chosen statutes and applicable law. Record statutory capital and actual operating funding separately.

Company particulars to complete

- Proposed legal name [KKEVO TECH with legal suffix confirmed by counsel]; availability evidence [reference].
- Legal form [decision]; registered office [full Cameroon address]; location plan [attachment]; occupancy evidence [lease/title/permission].
- Founders [full names or entity details]; identity documents [secure references]; nationality/residence and authority to subscribe [verified details].
- Capital [XAF]; share nominal value [XAF]; number of shares [number]; cash contributions [amount]; contributions in kind [description and valuation route].
- Allocation [founder shares and percentages]; paid/unpaid contribution evidence [receipts]; required deposits or certifications [confirmed route].
- Proposed manager [identity]; appointment duration/remuneration [decision]; financial year [dates]; proposed duration [years].
- Formation representative [name]; filing centre/registry [location]; lawyer/notary [contact]; formation budget [amount].
- Required beneficial-owner, tax, employer and bank disclosures [confirmed requirements and evidence].

Store identities in a restricted formation folder. Do not include identity scans, passwords or bank credentials in the board circulation copy.

Filing checklist and evidence

MINPMEESA guidance identifies signed/stamped articles, a regularity/conformity or subscription/payment declaration, a management list and a signed location plan for commercial companies. OHADA guidance identifies constitutional documents, authorized persons and related registration information. Obtain the current CFCE checklist and official forms; confirm copies, authentication, criminal-record/declaration requirements, foreign-founder evidence, capital formalities,

activity permissions, publication and fees for this particular entity. [MINPMEESA guidance OHADA registration guidance](#)

Evidence	Prepared by	Completion record
Name and legal form checks	Counsel and founders	[Date/reference]
Articles and founder signatures	Founders under validated route	[Signed version]
Capital and contribution evidence	Founders and competent custodian	[Receipt/reference]
Office and location documents	Formation coordinator	[Attachment]
Management and identity documents	Proposed manager	[Secure references]
Official filing and required declarations	Authorized representative	[Form version and receipt]
Publication and additional permissions	Counsel where applicable	[Proof or reason not applicable]
Registration and tax outputs	Competent authorities	[Extract/identifier]

Do not reproduce a government certificate or invent a registration/tax number. The representative records filing date, receipt, amendments, pending items and authentic outputs. Verify all returned particulars against the signed articles before opening company service accounts.

Projet de statuts de SARL

À compléter et faire valider avant signature. La présente version ne constitue pas une immatriculation. Les choix laissés entre crochets doivent être arrêtés par les associés.

Article 1 Forme

Il est constitué entre les soussignés une société à responsabilité limitée régie par les textes OHADA et les dispositions camerounaises applicables, ainsi que par les présents statuts. Si un associé unique est retenu, les dispositions relatives aux décisions collectives sont adaptées aux décisions de cet associé, dans les conditions légales.

Article 2 Dénomination

La dénomination est [KKEVO TECH]. Les actes destinés aux tiers portent la dénomination, la forme sociale, le capital, le siège et les mentions d'immatriculation exigées. La disponibilité du nom est vérifiée avant dépôt. Kkevo Family est le nom envisagé d'un produit exploité par la société, sous réserve des droits correspondants.

Article 3 Objet

La société a pour objet la conception, le développement, l'exploitation et la maintenance de logiciels, applications mobiles et plateformes numériques; les prestations d'ingénierie informatique, de conseil et d'assistance technique; et les activités directement liées à cet objet, dans les limites des autorisations nécessaires. L'exploitation de Kkevo Family demeure subordonnée aux règles de protection des

données et aux autorisations requises. Le traitement de données personnelles n'est pas assimilé à un droit de propriété sur ces données.

Article 4 Siège social

Le siège est fixé à [adresse complète, ville, Cameroun]. Tout transfert est décidé par l'organe compétent selon la loi et donne lieu aux mises à jour, notifications et formalités requises. Le titre d'occupation et le plan de localisation sont annexés au dossier.

Article 5 Durée

La durée est de [nombre] années à compter de l'immatriculation, sauf prorogation, dissolution anticipée ou autre cause légale. La durée retenue doit respecter le maximum applicable.

Article 6 Apports

Les apports en numéraire sont [identité, montant souscrit, montant versé, preuve]. Les apports en nature sont [description, propriétaire, droits transférés, valeur, rapport d'évaluation requis]. Aucun logiciel, marque ou autre actif appartenant à un tiers n'est apporté sans titre valable. Les associés complètent l'annexe des apports et le régime de libération validé par le conseil.

Article 7 Capital social

Le capital est fixé à [montant XAF], divisé en [nombre] parts égales de [valeur nominale XAF]. Ces données satisfont aux minima et formalités applicables confirmés par le conseil. La répartition nominative figure en annexe. Le total des parts et apports concorde avec le capital déclaré et les pièces de versement.

Article 8 Droits attachés aux parts

Chaque part confère les droits et obligations prévus par les textes applicables. Les modalités de vote, de participation aux résultats et de contribution aux pertes respectent les règles impératives. Les parts ne confèrent aucun droit personnel d'accès aux données des utilisateurs ou des familles.

Article 9 Cession et transmission

Les cessions, transmissions, agréments, notifications et mises à jour du registre des associés sont réalisés selon les conditions légales et les stipulations licites arrêtées avec le conseil. Modalités particulières retenues [à compléter]. Toute convention entre associés demeure compatible avec les statuts et les droits impératifs.

Article 10 Gérance

La société est gérée par [nom, identité], nommé(e) par [présents statuts ou acte séparé], pour [durée], avec [modalités de rémunération]. L'acceptation et la capacité du gérant sont documentées. Nomination, révocation, vacance et remplacement suivent les règles applicables; un acte séparé peut préciser la délégation opérationnelle.

Article 11 Pouvoirs de la gérance

Le gérant représente la société dans les limites des pouvoirs légaux. Les seuils internes d'approbation pour dépenses, emprunts, fournisseurs, actifs et lancement sont fixés dans une décision distincte. Leur opposabilité aux tiers est appréciée selon la loi; un seuil interne n'est pas présenté comme limitant automatiquement les droits de tiers.

Article 12 Décisions des associés

Les décisions ordinaires et extraordinaires, convocations, consultations, quorums, majorités et procès-verbaux respectent les règles impératives. Le conseil insère les modalités exactes après validation du nombre et de la qualité des associés. Les matières réservées ne sont pas transférées au comité interne par une simple charte.

Article 13 Information et registres

La société tient les registres sociaux, documents comptables et décisions nécessaires. L'information des associés s'exerce dans les limites applicables. Les rapports sur Kkevo Family utilisent des données agrégées ou expurgées; les droits sociaux ne justifient pas un accès généralisé aux profils, portraits ou récits familiaux.

Article 14 Exercice social

L'exercice commence le [date] et se termine le [date]. Le premier exercice suit le calendrier validé avec le conseil et le comptable. La société prépare et approuve ses comptes dans les formes et délais applicables et accomplit les déclarations et dépôts requis.

Article 15 Résultats et réserves

L'affectation des résultats, les réserves légales et autres réserves, ainsi que toute distribution, sont décidées selon les règles applicables après établissement de comptes appropriés. Aucune distribution ou rémunération de dirigeant n'est fondée sur des chiffres non vérifiés.

Article 16 Contrôle légal et conventions

Le conseil vérifie l'obligation éventuelle de désigner un commissaire aux comptes et les règles relatives aux conventions avec associés, dirigeants et personnes liées. Les conflits sont déclarés, les abstentions enregistrées et les approbations requises obtenues.

Article 17 Actifs intellectuels et documents

Les actifs nécessaires sont acquis, apportés ou licenciés par écrit. La société conserve les titres et conditions d'exploitation, dont les logiciels libres et les droits sur les images et symboles. Les documents de gouvernance précisent les responsabilités de confidentialité et de sécurité sans attribuer à la société la propriété des données des personnes.

Article 18 Comité interne de suivi

Les associés peuvent établir un comité consultatif de suivi du produit et des risques. Sa charte, sa composition et ses délégations sont distinctes. Il ne se substitue ni à la gérance ni aux décisions légalement réservées aux associés et ne dispose pas de pouvoirs statutaires non valablement conférés.

Article 19 Modification et transformation

Toute modification du capital, des statuts ou de la forme sociale est adoptée et publiée selon les règles applicables. Les effets sur les contrats, responsabilités et informations des utilisateurs sont examinés avant mise en œuvre.

Article 20 Dissolution et liquidation

La dissolution et la liquidation sont conduites par l'organe compétent et le liquidateur régulièrement désigné. Un plan distinct règle les droits des utilisateurs, la restitution ou l'effacement des données, la

clôture des services et les conservations légalement justifiées. Les données familiales ne sont pas librement cédées comme un stock commercial.

Article 21 Actes accomplis pendant la formation

La liste détaillée des engagements antérieurs figure en annexe avec auteur, date, bénéficiaire, montant, conditions et mécanisme de reprise proposé. La reprise après immatriculation est décidée selon les règles applicables. Aucune signature au nom d'une personne morale inexistante n'est réputée valable par ces seuls statuts.

Article 22 Formalités et litiges

Pouvoir est donné à [mandataire] pour accomplir les formalités expressément prévues par le mandat annexé. Tout différend est traité conformément aux règles de compétence applicables et aux mécanismes licites retenus avec le conseil. Aucune stipulation ne prive une personne de droits impératifs.

Fait à [ville], le [date], en [nombre confirmé] exemplaires. Associés [noms et signatures]. Gérant acceptant [nom et signature]. Authentification [route et référence]. Validation conseil [référence].

Instruments complémentaires de constitution

Décision des fondateurs et nomination de la gérance

Nous, [identités des fondateurs], décidons de constituer [dénomination et forme] au siège [adresse], avec un capital [XAF] et la répartition annexée. Nous approuvons les statuts version [version/date] et nommons [nom] gérant pour [durée], selon [rémunération ou décision séparée]. Le gérant accepte et déclare les éventuelles incompatibilités ou conflits [détails]. Le mandat de dépôt annexé est approuvé. Décision, règles de vote et qualité des signataires [vérifiées]. Signatures [fondateurs et gérant], date [date].

État des souscriptions et apports

Pour chaque souscripteur: identité []; parts souscrites []; montant total []; numéraire versé []; montant restant et échéance validée []; apport en nature et titre []; preuve et dépositaire []; signature [].
Totaux: capital []; parts []; valeur par part []; sommes effectivement déposées []; rapprochement vérifié par []. Aucun versement n'est attesté sans preuve.

Déclaration de régularité et de conformité

Nous, [fondateurs ou mandataire habilité], déclarons, après vérification des actes annexés, que les opérations de constitution de [société] ont été accomplies selon les règles applicables. Pièces contrôlées [liste], capital et versements [preuves], statuts [version], nominations [références], réserves ou corrections [détails]. Cette déclaration ne doit être signée qu'après validation de sa forme et de l'exactitude des opérations. Fait à [], le [], signatures [], qualité [].

Mandat limité de formalités

Les fondateurs [identités] habilitent [mandataire] à déposer les pièces approuvées, recevoir les récépissés et transmettre les demandes de correction auprès de [CFCE/greffe]. Le mandataire ne peut modifier le capital, les associés, la gérance, l'objet ou le siège sans nouvelle instruction écrite. Budget maximal [XAF]; durée [dates]; obligations de compte rendu []; frais sur justificatifs. Signatures des mandants []; acceptation du mandataire [].

Déclaration personnelle et pièces officielles

Identité du déclarant []; qualité []; adresse []; référence de pièce []. Déclaration envisagée: Je déclare sur l'honneur ne pas faire l'objet d'une interdiction m'empêchant d'exercer les fonctions ou activités envisagées, sous réserve de vérification et de production des pièces officielles exigées. Fait à [], le [], signature []. Le conseil confirme l'éligibilité de cette déclaration, les documents qui doivent la compléter et leur échéance; elle ne remplace pas un extrait officiel lorsqu'il est exigé.

Liste des dirigeants et personnes habilitées

Pour chaque personne: nom complet []; date/lieu de naissance []; adresse []; nationalité []; fonction []; acte de nomination []; pouvoir de signature []; restrictions internes []; pièce justificative []; certification selon procédure applicable []. Garder les données détaillées dans le dossier restreint.

État des actes antérieurs et actifs

Pour chaque acte: auteur []; date []; fournisseur ou auteur de l'actif []; engagement ou actif []; montant/licence []; droit de reprise ou transfert []; décision requise []; document signé []. Séparer les actifs logiciels, logos et domaines des données d'utilisateurs. Les données réelles déjà détenues nécessitent leur propre examen de légalité, information et effacement éventuel.

Post registration plan

The coordinator verifies the registration and tax evidence, obtains professional bookkeeping advice and confirms tax declarations, fiscal regime and any employer/CNPS obligations. The manager opens company accounts, establishes dual payment review at [threshold], updates commercial documents and signs only within authority. Brand protection, operating permissions and data-processing permissions are assessed separately from registration.

Before public launch, complete the data authorization and assessment dossier in document 02, adopt policies, execute contracts and transfer app assets. A successful registration is not permission to process all relatives' data. Maintain official outputs, future changes, renewal dates where relevant, accountant/counsel contacts and annual compliance tasks in document 07.

Execution clearance

Legal form confirmed []; all placeholders completed []; mandatory clauses/voting rules reviewed []; capital route confirmed []; founder identities and rights verified []; current official forms attached []; signature/copy/publication/fee route confirmed []; manager authority established []. Counsel [signature/date]. Founders [signatures/date]. Filing representative [signature/date].

Kkevo Family data governance and processing assessment

Document KKT DATA 001 | Version 0.1 | Confidential | Proposed policy and assessment

This document defines the proposed rules for collecting, using, sharing and disposing of Kkevo Family data. The accountable operator will be the registered KKEVO Tech legal entity. Until registration, founders must identify who actually controls any existing real records and how those records were collected. The proposed company does not retroactively authorize earlier processing.

Policy scope and responsibility

The policy covers accounts, relatives who do not hold accounts, children represented in records, deceased persons, family administrators, staff, contractors and providers. It covers the Android app, API, database, portraits, exports, logs, support cases, mail, backups and devices used for administration. User-uploaded records are personal information even when visible only to a family.

The privacy lead maintains this document and the processing register. The manager funds compliance and appoints operators. Engineering implements the approved rules. Counsel determines the legal permissions; the board approves company choices within lawful bounds. A family owner controls participation in the product, not the legal rights of the people described.

Purpose limitations

Use data only to operate accounts, create and maintain approved family records, suggest possible recorded-family connections when enabled, administer invitations/access, deliver requested recovery messages, process imports/exports, handle support and content complaints, and maintain security and service continuity. No advertising resale, unrelated marketing, DNA analysis, facial identification or AI training on family content is authorized by this policy. Any future purpose requires separate assessment and approval.

Collect the minimum facts needed. Do not request national identity numbers, financial details, health diagnoses, religious or political beliefs, ethnicity, precise home addresses or DNA. Free-text stories and imports can still introduce such material; warn contributors and provide a review/removal route. Counsel must validate treatment of names, places, language, regional origin and genealogical inferences before a real-data release.

Consent and inclusion rules

An account holder must receive clear, purpose-specific information before submitting information. Distinguish terms acceptance, core personal-data consent, inclusion of another person, optional discovery and device permissions. A signature on the general terms or a device permission does not prove another relative's consent.

For living adults, require a verified, recorded permission route accepted by counsel before activating a personal record. An uploader's assertion that someone is family is insufficient. If a person cannot be contacted, counsel must assess an available lawful route; absent one, exclude that personal information rather than assume an exemption. The existing app does not yet supply this complete evidence workflow.

The proposed initial account audience is adults aged 18 or older. Children may still appear in family records, so adult-only accounts do not remove the need for parental/legal-representative permission and safeguards. Permit child records only after an approved verification route, minimal fields and disclosure controls are implemented. Do not store full identity papers as routine proof where a less intrusive method suffices.

Deceased records require a separate approved route, including any applicable post-mortem instructions or permitted legal retention. Do not assume that death makes records free to retain indefinitely. Existing historical records and imported trees must undergo the same assessment. A general heritage purpose is not an automatic permission.

Store the consent/personal-data permission reference, purpose, person or representative, scope, notice version, date, verification method, source and withdrawal state in a restricted register. Preserve only enough evidence to demonstrate permission. Withdrawal stops optional discovery promptly and routes the relevant records for disposition. Loss of a family membership must not remove the right to make a privacy request.

Access and family participation

The launch service should remain private. Viewing access covers the entire authorized family tree, including profiles, relationships, stories and portraits. Show that scope before approval. Editors modify within granted permissions; owners review participation and role changes. Treat uncertain suggestions as candidates; they do not establish biological relationships or identity and never cause an automatic merge.

Approving a join requires review of the invitation, candidate identity and intended existing profile. Do not expose additional family content to persuade an outsider to join. Revocation must block API access and clear accessible cached views on refresh. Signed portrait links may remain usable until expiry; do not promise instantaneous revocation of previously issued links. Previously saved or shared exports cannot be recalled by the app.

For a disputed living-person record, suspend optional discovery and minimize further disclosure while the privacy lead reviews it. If the current app cannot isolate the disputed record, assess restricting the affected tree or pausing that workflow. Do not falsely promise per-person or branch access restrictions that the app lacks.

Processing register

Each entry below is a working inventory. Add actual field names, data source, owner, permission evidence, recipients, countries, safeguards and retention identifier. No entry is approved for production until its legal route and provider particulars are recorded.

ID	Operation and people	Data and recipients	Permission and retention record
P01	Account and recovery for registered users	Identity/contact, password hashes, tokens; API, database and mail provider	Core consent route [review]; R01 R04
P02	Family records for members and relatives	Names, dates/places, relations, events; permitted family users	Per-person or representative route [review]; R02
P03	Ancestor suggestions for opted-in users and candidate relatives	Recorded ancestor names/path and disambiguating facts; limited candidate output	Separate opt-in and matching classification [review]; R03
P04	Invitations and participation requests	Invitation secrets, candidate/profile, roles/status; owner and requester	Inclusion/access evidence [review]; R03
P05	Stories and portraits of represented people	Text/photos and revision state; whole-tree members, private media provider	Contributor rights and personal-data permission [review]; R02

ID	Operation and people	Data and recipients	Permission and retention record
P06	JSON import and export	Profiles/links/events/stories; selected destination and user's file provider	Authority to transfer and include relatives [review]; R05
P07	Content and privacy cases	Reporter, target, request, response and evidence; restricted operators	Case purpose and lawful retention [review]; R06
P08	Service security and diagnostics	Minimal event metadata, source address, account references; approved operations providers	Necessary lawful route [review]; R07
P09	Backup and restore	Database and media snapshots; restricted storage provider	Same source-data permissions and restore safeguards; R08
P10	Device storage	App cache, selected files, credential/draft vault; account/device user	Device disclosure and cleanup; R09

For every operation record: controller contact, processor/contact, purpose, source, subjects, exact categories, collection method, disclosure recipients, special/minor/deceased data flag, storage/remote-access countries, safeguards, authority reference, permission evidence, retention trigger, deletion mechanism, risk assessment reference, last review and accountable owner. A register listing placeholders is not a completed statutory record.

Retention and disposition schedule

The periods below are board proposals requiring counsel validation and technical proof. They are not claimed statutory periods. A valid legal hold is narrowly documented, segregated, reviewed and disclosed where lawful; the existence of a dispute does not justify retaining an entire tree indefinitely.

ID	Data category	Proposed rule	Release condition
R01	Account records	Active authorized service; assess and execute deletion immediately when applicable, after proportionate identity checks	Record actual execution and necessary exceptions
R02	Shared family records and media	While individually authorized purpose remains; review withdrawal, objection, death and disputed accuracy promptly	Approved living/minor/deceased disposition rules
R03	Invitations and discovery/request state	Secret expires as configured; proposed purge of resolved metadata after 90 days	Verify actual expiry and access review needs
R04	Recovery/verification secrets	Configured short expiry; no plaintext secrets in operational logs; purge expired unused material	Record actual code/token lifetime
R05	Imports exports and request receipts	No separate server export archive; proposed create/import receipt cleanup after 30 days	Preserve safe uncertain retries without indefinite payload copies

ID	Data category	Proposed rule	Release condition
R06	Support and rights cases	Proposed 12 months after closure for minimum case evidence, subject to lawful need	Remove unnecessary family content and identity proofs sooner
R07	Security logs	Proposed 90 days; scrub payloads, tokens and names	Confirm lawful basis, actual configuration and holds
R08	Backups	Proposed maximum 30-day rotation; prevent use of erased/restricted records during restore	Validate lawful treatment where faster removal is required
R09	Device drafts and caches	Existing drafts expire after 24 hours; clear on save/discard/account cleanup; ordinary cache cleared on account cleanup/access refresh	Test signed release and document residual device/file behavior

Users' own exported files are outside routine company deletion control. Tell users to remove or protect copies and, where legally required, notify identified recipients without revealing other relatives' information. Internal retention periods must be revised if authorization conditions impose different limits. Do not use backup rotation to defer necessary immediate deletion from active systems.

Supplier and international transfer rules

Before engaging hosting, database, object storage, email, monitoring or support vendors, record actual legal entities, storage countries, backup locations, remote support access, subprocessors, deletion capabilities and security evidence. The provider assessment and contract in document 06 must be executed. Refuse unbounded reuse of family data for provider training or advertising.

Select a provider only after the lawful country/transfer route is documented. A Cameroon provider with overseas backups or foreign support may still involve a transfer. Similarly, board members viewing raw records abroad require assessment. Do not substitute a generic European transfer contract for Cameroon permissions. Record approvals and changes in the transfer register; unresolved overseas arrangements block use with real records.

Initial impact assessment

This is an initial assessment for the current workflow, not evidence of regulator approval. Review interviews with representative consenting families and actual deployment configuration before signing. The impact on non-users is material: a person can be identified through a parent's profile even if their own record is removed. Relationship changes can reveal sensitive parentage, adoption, disputes or location patterns.

Risk	Initial severity	Proposed controls and evidence	Remaining decision
Relative recorded without permission	Critical	Inclusion evidence, non-user requests, removal/restriction exercise	Lawful route and implementation absent
Child exposed through family records	Critical	Adult account eligibility, guardian review, minimal records, rapid safety handling	Verification and child-record rules unresolved

Risk	Initial severity	Proposed controls and evidence	Remaining decision
Historical/deceased records retained without authority	High	Post-mortem/legal assessment, source and instruction register	Historical-tree model requires legal validation
Wrong matching or family conflict	High	Optional candidate suggestions, no automatic merge, owner review and correction	Review interconnection/inference permissions
Member export or portrait disclosure	High	Whole-tree scope notice, export warning, private media, short-lived links	Physical-device and provider controls unproven
Provider or privileged-user misuse	High	Contracts, least privilege, reviewed access, incident process	Providers and staffing not appointed
Erasure defeated by shared links or restored backups	Critical	Disposition map, deletion ledger, restore replay and verification	Erasure implementation pending

Residual risks cannot be accepted as a substitute for lawfulness. Record controls tested [], residual ratings [], affected-person feedback [], unresolved questions [], required consultation/permission [], legal opinion [], privacy recommendation [], board decision []. Assess again before new countries, new vendors, public sharing, material matching changes or new data categories.

Regulatory preparation dossier

Prepare a submission set containing company registration and signatory authority; controller/processor contacts; service purpose and territories; the processing register; data flow and technical architecture; permission and notice evidence; minor/deceased/sensitive-data assessment; impact assessment; recipient/transfer inventory and contracts; security/incident/backup controls; retention and rights procedures; and test evidence. Attach current official forms obtained from the competent authority. This dossier is not itself a government filing or authorization.

Counsel records the applicability, exact sections, implementing instruments, official channel, form version, attachments, fees if any, deadline and authorization reference for each processing, interconnection and transfer issue. If the administrative channel is unclear or unavailable, request documented counsel guidance and official clarification; absence of a reachable office must not be treated as permission.

Request for legal assessment

To [Cameroon counsel], from [founder or lawful company representative], date []. Please assess Kkevo Family's proposed processing model before real-data deployment, specifically permissions for non-user living relatives, children's records, deceased records and post-mortem instructions, special-category inferences, automated ancestry suggestions and file interconnection, overseas access/storage, processing authorization, security audit requirements, retention, rights response and incident notifications. Please distinguish statutory requirements, current administrative procedures, unresolved questions and product changes needed. Attachments documents 00 to 07, code/data inventory [reference], selected vendor candidates []. Deliverable: written recommendations and approval conditions; no certification is requested without completed evidence.

Regulatory cover letter for adaptation

From [registered legal entity and address], represented by [authorized person], to [verified competent authority], date []. Subject: [request for authorization or clarification using the correct official procedure]. We propose operating Kkevo Family in [territories] for [specific purposes]. Attached are the processing inventory, impact assessment, controls, notices and recipient/transfer details identified in the annex list. We request [precise decision]. Processing commencement [planned date subject to authorization]. Contact [verified privacy contact]. Signature [authorized signatory]. Counsel must validate the recipient, requested route and declarations before dispatch. No correspondence has been sent by preparing this template.

Policy implementation and approval

Engineering supplies acceptance tests for inclusion permission, revoked access, opt-in withdrawal, notices, report handling, deletion/anonymization, caches, portraits, import receipts and backup restore. The privacy lead verifies all public statements against those results. Administrative case handling may complete existing rights workflows, but cannot conceal missing permissions or a broken deletion path.

Owner [privacy lead]. Legal reviewer []. Board decision []. Effective date []. Next review []. Superseded version []. Unresolved decisions []. Supporting evidence []. Signature []. Do not mark effective until legal and technical release conditions are met.

Kkevo Family user notices and terms in English and French

Document KKT NOTICE 001 | Version 0.1 | Publication drafts awaiting legal and operational approval

The privacy notice, terms, deletion notice and permission messages below are proposed user-facing documents. Complete every bracketed field and verify every statement against the deployed service before publication. KKEVO Tech is not yet incorporated; the eventual registered entity must be identified accurately. The board reading copy must not be published as the app's privacy policy.

Publication control

Approve English and French together. Publish accessible web pages under the verified company domain, link them in the app and store listing, and archive their exact versions and effective dates. Provide notices to people represented in records, including non-users, through the approved route. Terms acceptance and privacy permission must have separate purposes and evidence. Operators must be ready to handle the requests described.

Publication fields: legal entity []; registered address []; RCCM/other relevant identity []; privacy contact []; support contact []; public privacy URL []; public deletion URL []; provider/country list []; adopted retention schedule []; rights/complaint channel confirmed by counsel []; policy version/effective date []. All remain pending until verified.

Privacy notice English

Who operates Kkevo Family

Kkevo Family is operated by [full registered KKEVO Tech entity], at [registered address]. Contact us about privacy at [privacy contact] and about support at [support contact]. This notice is version [version], effective [date]. It explains information about account holders and people represented in family records, including people who have never registered.

Information we handle and its sources

You provide account details, contact information, family profiles, recorded names and birth/death dates or places, relationships, events, stories and portraits. Other family members may provide information about you. We also handle invitations, membership decisions, changes to shared records, content reports, support and privacy requests, recovery/verification records, and limited technical security information such as [verified log categories]. Passwords are stored as protected hashes; recovery credentials and device sessions are handled using the security arrangements described below.

Records may come from you, authorized family contributors, permitted imports, and our operation of the service. Family facts are user submissions and may be incomplete or incorrect. Do not upload identity documents, financial details, health information, religious or political beliefs, ethnicity, DNA or other unnecessary sensitive material into family stories or profiles.

Why we use information

We use information to provide accounts and recovery, maintain authorized family records, administer invitations and access, show optional suggestions based on recorded ancestors, perform requested imports/exports, address reports and privacy requests, and protect and restore the service. Our permission route for each purpose is [approved purpose-specific description]. We request separate choices where required. Agreeing to the terms does not automatically give permission to process information about every relative.

Optional discovery uses recorded parent/grandparent names and related disambiguating facts to suggest possible connections. A suggestion does not prove identity or biological parentage. Joining remains subject to approval; we do not automatically merge family records. You can turn optional discovery off through [verified route].

Who can see family records

Family trees are private within the service. A person granted viewing access can see the whole authorized tree, including its profiles, portraits and stories. The service does not currently offer branch-only access. Editing and administration depend on the role granted. Consider this access scope before inviting or approving another person.

Members can make copies using the available export tools and share selected information outside the app. We cannot remotely erase files that another person has already saved. Previously issued portrait links may remain usable until their short expiry even after access changes. Tell us if information is disputed or shared improperly so we can assess appropriate action.

Providers and countries

We use [named legal providers and functions] to supply [hosting/database/private file storage/email/security/support]. Data is stored in [countries]; backup and remote support locations are [countries]. The approved transfer arrangements are [specific description]. We do not authorize sale of family data or use of family content for advertising or AI training. We may disclose information when a valid legal obligation requires it, after reviewing authority and scope.

Children and deceased relatives

Accounts are intended for adults aged 18 or older [confirm adopted eligibility and enforcement]. Information about children may be included only through the approved parental or legal-representative permission process [verified route]. An adult account holder's permission does not cover every child's information. We minimize children's information and review safety requests urgently.

Information about deceased relatives is handled through [approved post-mortem instruction or other lawful route]. It is not retained indefinitely merely because it is family history. Contact us to provide applicable instructions or raise a concern about a deceased person's record.

Retention and deletion

We retain information for its approved purpose under [link to adopted retention summary]. Account, family records, invitation metadata, cases, security logs and backups have different triggers and periods: [insert adopted category-specific periods and reasons]. When an applicable deletion request is verified, we act in accordance with the law and explain any necessary, limited retention. Legal holds are restricted to the information and purpose they cover.

Deleting an account and deciding what happens to shared family records are related but distinct steps. We examine personal information about you, uploaded content, access, portraits, discovery, shared relationships and provider copies. Another family administrator does not have an unconditional veto over your privacy rights. Where an authorized shared record remains, we explain what remains and why. Backup handling and expiry are [verified description].

Your choices and requests

Contact [privacy contact or request URL] to ask about access, correction, erasure, restriction, objection, portability, permission withdrawal or applicable post-mortem instructions. You do not need an account to raise a concern about information referring to you. We verify identity or representative authority proportionately and protect information about other people. Our process and applicable response timing are [approved description]; we explain the outcome and any available review route.

You can request account deletion through [in-app path] or [external deletion URL] without reinstalling the app. Requests are acknowledged separately from completion. You may also complain through [official competent authority route confirmed by counsel]. Contact us if you need help using these routes.

Security and your device

We use [verified deployment controls] including secure connections, controlled staff access and private storage. Kkevo Family does not claim end-to-end encryption of all family content. Operational access is limited to authorized purposes such as support, rights and security cases.

The app stores account-scoped caches and protected credentials/drafts on your device. Drafts expire after 24 hours and are cleared on successful save, discard or account cleanup. Ordinary cached family views use app-private storage. Files you choose to save may remain in your chosen folder or file-provider account. Protect your device and remove unwanted copies. Android photo/file access is requested through the relevant selection tools; cancelling a selection must not grant unrelated access.

Changes to this notice

We publish the updated version and effective date and explain material changes through [verified notification route]. A new processing purpose or changed permission requirement is assessed before use and requires a new choice where applicable. Privacy questions can be sent to [privacy contact].

Notice de confidentialité en français

Responsable de Kkevo Family

Kkevo Family est exploité par [dénomination juridique complète de KKEVO Tech], à [adresse du siège]. Pour la confidentialité, contactez [contact confidentialité]; pour l'assistance, [contact assistance]. Cette notice, version [version], prend effet le [date]. Elle concerne les titulaires de comptes et les personnes décrites dans les dossiers familiaux, y compris celles qui n'ont jamais créé de compte.

Informations traitées et sources

Vous fournissez les informations du compte et de contact, profils familiaux, noms et dates ou lieux de naissance/décès enregistrés, relations, événements, récits et portraits. D'autres membres peuvent fournir des informations vous concernant. Nous traitons également les invitations, décisions d'accès, modifications de dossiers, signalements, demandes d'assistance et de confidentialité, éléments de récupération/vérification et informations techniques limitées de sécurité telles que [catégories vérifiées]. Les mots de passe sont conservés sous forme de condensats protégés; les éléments de récupération et sessions suivent les mesures décrites ci-dessous.

Les sources peuvent être vous-même, des contributeurs autorisés, des imports permis et le fonctionnement du service. Les faits familiaux sont déclarés par les utilisateurs et peuvent être incomplets ou inexacts. Ne versez pas de pièces d'identité, données financières, informations de santé, convictions religieuses ou politiques, origine ethnique, ADN ou autres informations sensibles inutiles dans les profils ou récits.

Finalités

Nous utilisons les informations pour les comptes et leur récupération, les dossiers familiaux autorisés, invitations et accès, suggestions facultatives fondées sur les ancêtres enregistrés, imports/exports demandés, signalements, droits des personnes, sécurité et restauration du service. Le fondement autorisé pour chaque finalité est [description validée]. Nous recueillons des choix distincts lorsque nécessaire. L'acceptation des conditions ne vaut pas autorisation de traiter les informations de tous les proches.

La recherche facultative utilise les noms des parents/grands-parents et les faits pertinents pour proposer des connexions possibles. Une proposition ne prouve ni l'identité ni la filiation biologique. L'accès reste soumis à approbation; aucun rapprochement ne fusionne automatiquement les dossiers. Vous pouvez désactiver cette recherche par [procédure vérifiée].

Visibilité des dossiers

Les arbres sont privés dans le service. Une personne autorisée à consulter peut voir tout l'arbre concerné, avec profils, portraits et récits. Le service ne propose pas actuellement un accès limité à une branche. Les droits de modification et d'administration dépendent du rôle accordé. Vérifiez cette portée avant d'inviter ou d'approuver une personne.

Les membres peuvent enregistrer des copies avec les outils d'export et partager des informations hors de l'application. Nous ne pouvons pas effacer à distance les fichiers déjà sauvegardés par un tiers. Un lien de portrait déjà émis peut rester utilisable jusqu'à son expiration courte après un changement d'accès. Signalez toute contestation ou divulgation inappropriée pour que nous examinions les mesures utiles.

Prestataires et pays

Nous utilisons [prestataires juridiquement identifiés et fonctions] pour [hébergement/base de données/stockage privé/courriel/sécurité/assistance]. Les données sont stockées dans [pays]; les sauvegardes et accès d'assistance sont situés dans [pays]. Les modalités autorisées de transfert sont [description précise]. Nous n'autorisons ni la vente des données familiales ni leur utilisation pour la publicité ou l'entraînement d'IA. Une divulgation imposée par une obligation juridique valable fait l'objet d'un contrôle de l'autorité et de la portée.

Mineurs et proches décédés

Les comptes sont destinés aux adultes de 18 ans ou plus [confirmer la règle et son application]. Les informations d'un mineur ne peuvent être incluses que par la procédure validée d'autorisation parentale ou du représentant légal [procédure vérifiée]. Le consentement d'un titulaire adulte ne couvre pas tous les enfants. Nous limitons les informations et examinons sans délai les préoccupations de sécurité.

Les informations des personnes décédées suivent [instructions post mortem ou autre voie licite validée]. Le caractère familial ne justifie pas une conservation illimitée. Contactez-nous pour transmettre des instructions applicables ou signaler une difficulté concernant un dossier de personne décédée.

Conservation et suppression

La conservation suit les finalités autorisées et [lien vers le résumé adopté]. Comptes, dossiers familiaux, invitations, demandes, journaux et sauvegardes ont des déclencheurs et durées différents: [durées et motifs adoptés]. Lorsqu'une demande applicable est vérifiée, nous agissons conformément au droit et expliquons toute conservation nécessaire et limitée. Une mesure de conservation juridique est limitée à son objet.

Supprimer un compte et décider du sort des dossiers partagés sont des étapes liées mais distinctes. Nous examinons vos informations personnelles, contributions, accès, portraits, recherche, relations partagées et copies des prestataires. Un administrateur familial ne dispose pas d'un droit de veto absolu sur vos droits. Tout dossier partagé maintenu doit être autorisé et expliqué. Le traitement et l'expiration des sauvegardes sont [description vérifiée].

Choix et demandes

Contactez [contact ou URL confidentialité] pour l'accès, rectification, effacement, limitation, opposition, portabilité, retrait d'autorisation ou instructions post mortem applicables. Aucun compte n'est

nécessaire pour soulever une préoccupation vous concernant. Nous vérifions proportionnellement l'identité ou le pouvoir du représentant et protégeons les informations des tiers. La procédure et les délais applicables sont [description validée]; nous expliquons le résultat et la voie de réexamen.

Demandez la suppression du compte par [chemin dans l'application] ou [URL externe], sans réinstaller l'application. L'accusé de réception est distinct de la confirmation d'exécution. Vous pouvez saisir [voie officielle vérifiée par le conseil]. Contactez-nous si vous avez besoin d'aide.

Sécurité et appareil

Nous appliquons [mesures vérifiées], dont des connexions sécurisées, accès du personnel contrôlés et stockage privé. Kkevo Family ne prétend pas chiffrer de bout en bout tout le contenu familial. Les accès opérationnels sont limités aux finalités autorisées d'assistance, de traitement des droits et de sécurité.

L'application conserve des caches liés au compte et des éléments d'identification/brouillons protégés sur l'appareil. Les brouillons expirent après 24 heures et sont supprimés après enregistrement, abandon ou nettoyage du compte. Les vues familiales en cache utilisent le stockage privé de l'application. Les fichiers sauvegardés volontairement peuvent rester dans le dossier ou service choisi. Protégez l'appareil et retirez les copies inutiles. La sélection Android de photos/fichiers utilise les outils concernés; une annulation ne doit pas accorder d'accès sans rapport.

Modifications

Nous publions la version et sa date et expliquons les changements importants par [voie vérifiée]. Toute nouvelle finalité ou permission fait l'objet d'un examen préalable et d'un nouveau choix lorsque nécessaire. Questions: [contact confidentialité].

Terms of use English

Operator eligibility and service

These terms govern Kkevo Family provided by [registered entity/contact]. They take effect when you accept version [version/date]. Accounts are for people aged 18 or older under the adopted launch policy. You must provide accurate account information, protect credentials and report suspected misuse. We provide tools for authorized family records; we do not certify ancestry, establish legal parentage or adjudicate inheritance.

Family access and contributions

Use your own account. An invitation or suggestion does not grant access until the applicable approval. Viewing rights cover the whole tree, including stories and portraits; roles control editing and administration. Do not evade revoked access or share invitation secrets carelessly. Before uploading, ensure you have the required rights to the content and the lawful permission concerning represented people. Being a relative or tree owner is not sufficient by itself.

You retain the rights you validly hold in your contributions. You grant the operator a limited permission to store, display and process them for the authorized service purposes and duration. This does not transfer anyone's personal-data rights or authorize advertising or AI training. Imported/exported records remain subject to other people's rights. Protect copies and do not publish private family material without authorization.

Content rules and disputes

Do not submit unlawful content, threats, harassment, exploitation, identity fraud, malicious files, private contact or sensitive material without lawful authority, or content infringing copyright or privacy. Mark uncertainty in family facts and correct errors. Use [in-app report path] or [support/privacy contact] for concerns. We review reports, may restrict affected access/content proportionately, and explain

decisions where safe and lawful. Request review through [appeal route]. We may act urgently for safety or unlawful disclosure without waiting for a family administrator.

Account changes deletion and availability

You may stop using the service or request account deletion through the app or [external URL]. The approved deletion process evaluates your information and shared records; any necessary retention is explained. Suspension is not completion of deletion. We may restrict an account for serious misuse with proportionate review and explanation where appropriate. We seek to maintain the service but do not promise uninterrupted availability or perfect accuracy of user contributions. Material service closure includes an appropriate notice, rights and data-disposition plan.

Changes applicable law and contact

We explain material changes and obtain renewed acceptance or permission when required. The governing-law provision is [Cameroon provision reviewed by counsel], subject to mandatory rights and competent authorities. No term excludes non-excludable responsibility or prevents privacy complaints. Contact [support contact/address]. Pricing or payment terms are not introduced by these terms; any later paid service requires a separately reviewed offer.

Conditions d'utilisation en français

Exploitant éligibilité et service

Ces conditions régissent Kkevo Family fourni par [entité/contact]. Elles prennent effet lors de votre acceptation de la version [version/date]. Les comptes sont destinés aux personnes de 18 ans ou plus selon la règle de lancement adoptée. Fournissez des informations exactes, protégez les identifiants et signalez les abus. Le service permet de gérer des dossiers autorisés; il ne certifie pas l'ascendance, n'établit pas la filiation juridique et ne tranche pas les successions.

Accès familial et contributions

Utilisez votre propre compte. Une invitation ou proposition n'accorde aucun accès avant l'approbation applicable. La consultation porte sur tout l'arbre, récits et portraits compris; les rôles règlent la modification et l'administration. Ne contournez pas une révocation et protégez les secrets d'invitation. Avant tout versement, assurez-vous des droits sur le contenu et de l'autorisation licite relative aux personnes décrites. La qualité de proche ou propriétaire de l'arbre ne suffit pas.

Vous conservez les droits valablement détenus sur vos contributions. Vous autorisez l'exploitant, de façon limitée, à les stocker, afficher et traiter pour les finalités et la durée autorisées du service. Aucun droit des personnes n'est transféré et aucun usage publicitaire ou d'entraînement d'IA n'est autorisé. Les imports/exports restent soumis aux droits des tiers. Protégez les copies et ne publiez pas des informations familiales privées sans autorisation.

Contenus et contestations

Sont interdits les contenus illicites, menaces, harcèlement, exploitation, fraude d'identité, fichiers malveillants, divulgations de coordonnées privées ou informations sensibles sans autorisation licite, et atteintes au droit d'auteur ou à la vie privée. Signalez les incertitudes et corrigez les erreurs. Utilisez [chemin signalement] ou [contact] pour une préoccupation. Nous examinons, pouvons limiter proportionnellement l'accès/contenu et expliquons la décision lorsque cela est sûr et licite. Réexamen: [voie]. Une mesure urgente de sécurité ou contre une divulgation illicite peut intervenir sans attendre l'administrateur familial.

Compte suppression et disponibilité

Vous pouvez cesser l'utilisation ou demander la suppression par l'application ou [URL externe]. La procédure adoptée examine vos informations et les dossiers partagés et explique les conservations nécessaires. Une suspension n'est pas une suppression accomplie. Un abus grave peut entraîner une restriction proportionnée, avec examen et explication lorsque appropriés. Nous recherchons la continuité sans promettre une disponibilité ininterrompue ou l'exactitude parfaite des contributions. Toute fermeture importante prévoit information, droits et traitement des données.

Modifications droit applicable et contact

Nous expliquons les changements importants et recueillons une nouvelle acceptation ou permission lorsque nécessaire. Droit applicable: [clause camerounaise revue], sous réserve des droits impératifs et autorités compétentes. Aucune clause n'exclut une responsabilité impérative ou une plainte de confidentialité. Contact: [coordonnées]. Ces conditions n'introduisent aucun paiement; un service payant ultérieur nécessite une offre distincte validée.

Account deletion notice English and French

English: Request deletion in [verified app path] or at [working public URL]. You do not need to reinstall the app. We verify the request, review personal and shared records, carry out applicable deletion and explain any necessary retention and backup handling. A pending request means received, not erased. Contact [privacy contact] if you cannot access the account or the request concerns a relative's record. Cancellation is available only before execution reaches an irreversible step; completed deletion cannot be reversed.

Français: Demandez la suppression par [chemin vérifié] ou [URL publique fonctionnelle], sans réinstaller l'application. Nous vérifions, examinons les dossiers personnels et partagés, exécutons l'effacement applicable et expliquons toute conservation nécessaire et le traitement des sauvegardes. Une demande en attente est reçue, pas exécutée. Contactez [contact] si le compte est inaccessible ou si la demande concerne un proche. L'annulation n'est possible qu'avant une étape irréversible; un effacement accompli ne peut être annulé.

Purpose specific permission messages

Terms acceptance English: I accept the Kkevo Family Terms of Use version [version] and understand that viewing access covers the whole family tree. Français: J'accepte les conditions version [version] et comprends que la consultation porte sur tout l'arbre familial.

Optional discovery English: Enable suggestions using the recorded ancestor information described here [specific data and recipients]. This is optional and does not prove a relationship. You can withdraw through [route]. Français: Activer les suggestions utilisant [données et destinataires précis]. Ce choix facultatif ne prouve pas une relation; retrait par [voie]. No preselected acceptance.

Living-person permission English: I am [person or verified representative] and permit [specific facts] to be included for [purpose] and viewed by [defined family recipients] under notice [version]. Withdrawal and concerns [route]. Français: Je suis [personne/représentant vérifié] et autorise l'inclusion de [faits] pour [finalité], visibles par [destinataires], selon la notice [version]. Retrait et préoccupations [voie]. Counsel must approve evidence and verification before implementation.

Guardian permission English: Representative [name/authority reference] permits the necessary information [fields] concerning [child reference] for [defined purpose and recipients]. Français: Le représentant [nom/pouvoir] autorise les informations nécessaires [champs] de [enfant] pour [finalité/destinataires]. Do not use a generic single checkbox to bypass verified parental/legal-representative requirements.

Acceptance records and publication approval

Record terms version, notice version, purpose-specific choices, scope, timestamp, account/person/representative reference, language and withdrawal. Separate acknowledgements from proof of another person's permission. Limit evidence collection and avoid private content in acceptance logs.

Legal reviewer []; privacy reviewer []; English/French consistency reviewer []; deployment fact check []; working URL check []; board decision []; effective date []; acceptance implementation tested []; signatures []. Do not publish while any identity, provider, retention, rights or permission field remains unresolved.

Kkevo Family data rights and family content procedures

Document KKT OPS 001 | Version 0.1 | Confidential | Proposed operating procedures

The privacy and support teams use these procedures to complete the app's existing account, family, report and data-transfer workflows. A person may exercise rights even without an account or after losing access to a family. Protect the requester from unnecessary disclosure and distinguish a family-membership decision from a personal-data decision.

Intake and case control

Accept requests through the verified in-app routes, the public deletion resource, privacy/support contacts and other channels required by law. The current public deletion implementation authenticates account credentials; it does not provide a complete non-user rights route. Establish an accessible alternative before release. Never ask for a password by email or collect account-recovery secrets in a support ticket.

Create a restricted case record with case ID, received timestamp, requested action, person's contact preference, minimal record locator, claimed capacity, scope, urgency, owner, applicable timing, evidence reference and current state. Acknowledge receipt clearly without confirming a person's inclusion to an unverified third party. Avoid reproducing stories or family relationships in the subject line or board dashboard.

Proposed internal triage target: review new ordinary cases within one business day. Urgent child-safety, threats and unlawful disclosure are escalated immediately. This service target does not delay action that law requires sooner. Counsel supplies actual statutory timing and escalation channels; do not impose a standard 30-day waiting period on an applicable immediate-erasure case.

Use states Received, Verification needed, Under review, Action scheduled, Executing, Completed, Partially completed, Referred or Declined with reasons. The app's current pending/cancelled/completed deletion states are insufficient evidence of the internal execution steps. Do not mark Completed simply because an administrator changes a status.

Proportionate identity and representative checks

For an account holder, prefer authenticated re-verification or an established recovery route. For a non-user, collect the minimum facts necessary to identify the target without exposing other records. For a representative, verify authority and its scope; a family relationship alone is not a general mandate. A guardian, estate representative and uploader may have different powers.

Use a secure evidence channel if documents are genuinely required. Record the check and result, restrict raw copies and erase unnecessary copies promptly. Do not require excessive national identity papers for routine corrections. If verification fails, explain the minimum additional evidence needed or safe alternative without disclosing private records.

Access correction restriction and portability

For access, assemble information about the requester, sources, purposes, authorized recipients and relevant record use. Review references to other people and redact or explain protected portions. An export of the entire family is not a safe substitute for an individual's access response. Deliver through a secure verified channel and record receipt without retaining a redundant full archive.

For factual correction, distinguish an obvious inaccurate fact from a contested relationship. Ask for proportionate evidence, show uncertainty where possible and use existing revision/conflict checks so

one correction does not overwrite an unrelated change. The family owner may supply context but cannot veto a substantiated rights request. Suspend affected disclosure where appropriate while a dispute is reviewed; if the app cannot limit one record, decide a proportionate larger restriction with the privacy lead.

For restriction or objection, identify processing affected: profile visibility, optional discovery, matching, story/media use or retention. Withdrawal from discovery must stop the relevant future processing; it does not authorize unrelated deletion or retention. Record the lawful disposition of each category. For portability, provide the person's approved information in a structured format without automatically exposing other relatives. Existing JSON tree export omits photo files and does not by itself fulfil every personal portability request.

Account deletion execution

Step one verification and scope

Confirm the person and action; explain irreversible effects and distinguish account login, their personal record, their contributions and other people's data. Review any pending membership, import, save or recovery requests. Record applicable urgency and lawful exceptions. Cancel only while execution has not crossed an irreversible boundary, and do not create an arbitrary cooling-off period that defeats applicable rights.

Step two inventory and disposition

Map the account, linked person profiles, all trees and roles, owned families, relationships/events, stories/portraits, invitation and approval records, normalized ancestor indexes, cache keys, mutation receipts, credentials/tokens, support/report links, mail/provider copies and backups. Include copied imports and historical public settings where relevant. Assign Erase, Restrict, Truly anonymize, Transfer authorized administration, or Retain for identified lawful reason to each item. Pseudonymization alone is not anonymous if the person remains identifiable through context or links.

Step three ownership and shared history

Owner deletion may require a separately authorized transfer of administration, or removal/closure of an affected sole-owned tree. Verify the proposed new owner and remaining individual permissions; obtaining a successor does not justify retaining the departing person's information. Do not transfer user credentials or automatically appoint the next editor. A failed or contested transfer must not indefinitely hold the requester account open.

Remove personal references from other people's stories or portraits where applicable, while avoiding indiscriminate destruction of their unrelated information. Counsel determines what may remain as lawful shared history. A removed name with unchanged distinctive relationships can still identify a person; assess indirect identifiers before describing a record as anonymized.

Step four execute and verify

The authorized operator runs a scoped, replay-safe execution with a second reviewer for destructive shared-tree actions. Prevent concurrent writes from recreating deleted items; revoke sessions, recovery material and invitation access at the appropriate point. Delete active records and affected media, update relationships safely, remove discovery indexes and pending mutation payloads, request processor action and clear applicable company/device caches. Never log a full family dump as deletion evidence.

Verify outcomes with independent database/media/access checks and the subject's normal app paths. A mid-process failure remains In progress or Partially completed with restricted exposure and an assigned repair owner. Retry does not resurrect content or delete additional unrelated records. Audit

evidence records categories/counts, references and completion checks, not unnecessary personal facts.

Step five providers backups and confirmation

Obtain provider confirmations and enforce approved backup treatment. The deletion/restriction ledger contains only the minimum reference necessary to prevent reintroduction and is itself controlled by a lawful retention rule. During recovery, restore into an isolated environment, apply the current ledger and verify suppression before opening access. Backup expiry is explained accurately; a rotated snapshot is not proof of immediate erasure from all media.

Tell the requester what was erased, what remains, why, for how long or until which event, how backup copies are treated and what review route exists. Confirmation must identify actual completion time and outstanding provider or backup work. If retention makes the response partial, say so. Close the case only after assigned follow-ups are tracked.

Deletion and lifecycle scenario checklist

Scenario	Required disposition review	Acceptance evidence
Viewer or editor account	Account/session cleanup plus personal records and contributions, even without ownership	Revoked access and no residual discovery
Owner with willing successor	Separate administration transfer, valid rights for remaining records and requester disposition	Successor verified; requester rights completed
Sole owner without successor	Tree closure/removal decision with other subjects' rights protected	No orphan exposure or indefinite pending account
Non-user living relative	Identity review and information across all related records	Request possible without login or owner permission
Child or guardian request	Verified authority, minimal evidence and urgent safety assessment	No disclosure to an unverified adult
Deceased person	Applicable instructions/authority and lawful retention reviewed	Written counsel-approved disposition
Repeated request or concurrent import	Stable execution identity and suppression against recreation	Replay safe; no duplicated or revived data
Legal hold	Specific authority, scope, expiry/review and segregated access	Narrow retention, explanation where lawful

Joining invitations and ownership disputes

For suspected impersonation or a leaked invitation, revoke the invitation and investigate access logs without revealing the whole family to the claimant. Obtain the owner/requester accounts and target profile through protected references. Verify role and identity separately from recorded ancestry. A similar ancestor name is not proof of eligibility. Document approval, rejection or revocation and the safe explanation sent to each participant.

When family administrators disagree, pause disputed role changes and route control/rights concerns separately. Staff do not decide biological parentage, inheritance or legal succession through app permissions. Refer required legal questions to counsel. A company's moderation action can remove unsafe disclosure without declaring a historical fact true or false.

Content reports safety and review

Use the existing report receipt and operator response workflow. Triage unlawful disclosure, harassment, exploitation, copyright issues, impersonation and inaccurate records. Review only accessible necessary evidence with least privilege. The reporter's identity must not be shared with the complained-about member as routine practice. Notify recipients only as necessary and safe; avoid exposing a child or victim's location through the response.

Record reason, affected content/access, evidence, proportional action and response. Serious ongoing harm warrants immediate restriction and legal escalation. Resolve with a meaningful response rather than a generic status change. Provide independent review by a second operator or external reviewer when the original operator is conflicted. An appeal does not automatically restore unsafe content. Do not promise a public social-network blocking workflow the app has not implemented.

Imports exports and historical data review

Before a real-data import, verify inclusion permissions and the rights of all people represented. The app's import warning/count preview assists the user but is not legal clearance. Existing exported JSON can contain multiple relatives' data; maintain access checks, revision/retry integrity and destination confirmation. If an export is reported as unlawfully shared, record known recipients and seek an appropriate remedy without claiming remote recall.

Review historical real datasets for earlier visibility or permission gaps before migration. Identify provenance and exposure periods, restrict unauthorized processing, assess any incident duties, and notify affected people where required. A server switch to private access does not retrospectively cure a prior disclosure or consent defect.

Case forms and response templates

Rights request form

Case ID []. Received []. Request type [access/correction/erasure/restriction/objection/portability/withdrawal/post-mortem]. Requester contact []. Account optional []. Record locator [minimal]. Represented person/authority []. Exact requested action []. Safety concern []. Preferred language/channel []. Evidence reference [restricted]. Staff owner []. Applicable timing [legal review]. Do not request passwords.

Disposition record

Case []. Verified authority []. Categories and copies reviewed []. Per-category action/reason []. Shared administration decision []. Necessary recipients []. Lawful hold scope/review []. Execution identity []. Authorized operator/reviewer []. Provider instructions/receipts []. Backup/suppression handling []. Verification []. Remaining follow-ups []. Actual completion [].

Acknowledgement

We received your request [case reference] on [date]. This confirms receipt, not completion. We need [minimum additional evidence, if applicable] through [secure route]. The assigned team will explain the action and applicable timing. Contact [verified contact] if there is an urgent safety concern. Do not send your password or recovery code.

Completion or partial completion

For request [case], on [date] we completed [specific actions]. The following information remains [categories], for [verified reason] until [period/event]. Provider and backup handling is [actual state].

Outstanding actions [owner/date]. You may request review through [route] or exercise applicable complaint rights. Do not describe a partial result as full erasure.

Content decision and review request

Report [case] was reviewed for [safe summary]. Action [restriction/correction/removal/other] was taken on [date] for [reason suitable for disclosure]. We have not disclosed other people's private information in this response. To request review, contact [route] with the case reference and relevant facts. Urgent safety concerns [contact].

Adoption and operator training

Train operators using synthetic viewer, editor, owner, sole-owner, non-user, child, deceased and conflicting-import cases. Complete a full deletion demonstration including provider copies, portraits, indexes and restored backups before public release. Evidence []; procedure owner []; legal approval []; board adoption []; effective date []; deputy/reviewer []; review date [].

Kkevo Family security incident and recovery procedures

Document KKT SEC 001 | Version 0.1 | Confidential | Proposed security policy

KKEVO Tech must protect the app, API, family database, portraits, credentials, provider accounts and operational records. These procedures set the proposed operating standard. Existing local tests do not establish a deployed security program. The security lead must complete control evidence, escalation contacts and exercises before the policy becomes effective.

Staff access and privileged actions

Use individual company accounts, multifactor authentication for provider and privileged accounts where supported, and role-based least privilege. Do not share the database superuser, Play owner account or signing key. Separate ordinary support access from privileged database/media administration. Grant production access only after documented approval, training and contractual confidentiality. Log access purpose and action using minimal metadata.

Review privileged access monthly during pilot and at least quarterly thereafter as a proposed company cadence. Remove access promptly on departure or role change, revoke sessions and rotate secrets known to the departing person. Time-limit emergency access, record the reason and obtain retrospective independent review. Board reporting uses redacted case summaries, not unrestricted browsing of family content.

Privileged deletion, shared-tree closure, backup restoration and signing custody changes require a second reviewer. If staffing cannot provide one, appoint an external reviewer and document emergency exceptions. Avoid delaying urgent lawful erasure or incident containment; record the emergency action and review promptly.

Environment deployment and secret controls

Separate development, staging and production, including credentials, mail, storage and logs. Use synthetic records for ordinary development and demonstrations. Real-data migration or support copies need their own approved purpose, scope, permissions, expiry and access controls. Do not transfer database dumps into personal drives or public tickets.

Use public HTTPS in the release, protected secrets, private media storage and restrictive raw-file paths. Confirm effective server membership checks, backup encryption/access protection, signed-link expiry, token/recovery behavior and dependency security. Graph caches are app-private; they are not a claim of end-to-end encryption. Selected exports may remain in user-controlled storage. Test those boundaries on the signed app.

Protect upload types/sizes, imports, parser errors, throttling, transactional changes and idempotent uncertain retries. Remove account names, family stories, passwords, tokens and secret URLs from logs and error tracking. Use approved structured security events and limited source-address retention. Record collection by every SDK and service; disabling a dashboard is not proof that its SDK sends no data.

Incident identification and immediate response

Examples include outsiders accessing a tree, exposed raw media, stolen credentials, incorrect family approval, unauthorized export, unrecoverable data loss, malware, fraudulent support requests and data resurrected from backups. A content report may also reveal a personal-data breach; assess both routes.

Any worker reports a suspected incident immediately to [security escalation contact] and [privacy lead]. The first responder preserves minimal evidence, records when the company became aware, contains exposure within their authority and calls the incident lead. Do not delete relevant logs indiscriminately, alter evidence or send family dumps through email.

Counsel must operationalize the immediate authority and data-subject notification obligations identified in document 00. Do not wait for a complete forensic report or a board meeting before addressing notification. Use the verified authority channel and retain submission proof. If facts are incomplete, send the appropriate initial information and documented updates under legal guidance. An internal response target is never a substitute for legal timing.

Severity and authority

Severity	Example	Response and accountable owner
Critical	Active unauthorized family disclosure, child harm, compromised signing/production keys	Incident lead contains immediately; privacy/counsel assess notification; manager funds response
High	Unauthorized limited access or serious corruption without active spread	Immediate triage, preserve evidence, restrict affected services and assess subjects
Moderate	Suspected defect with no confirmed disclosure or loss	Investigate promptly, record rationale and reassess if impact changes
Low	Operational issue with verified absence of personal-data/security impact	Normal support handling, escalation if new evidence emerges

The lead may disable affected discovery, invitations, imports, raw-media access or a compromised service when necessary. Document which functions were paused and how existing user rights remain available. Do not publish an unverified claim that no data was affected.

Incident workflow

1. Register incident ID, awareness time, reporter, affected systems and initial facts. Appoint lead, privacy/legal reviewer and communications owner.
2. Contain exposed paths, revoke compromised access and protect affected users. Preserve evidence hashes, timestamps and protected references without unnecessary copies.
3. Determine categories/subjects, likely exposure window, unauthorized recipients, child/non-user involvement, loss/corruption and provider responsibility. Record uncertainty explicitly.
4. Make and execute the legally reviewed notification decision immediately as applicable. Track authority and subject notices independently and in the appropriate languages.
5. Eradicate the cause, rotate credentials, repair access/storage, test the fix and review whether rollback or restoration could recreate unlawful disclosure.
6. Restore cautiously, verify with independent checks and communicate actual service state. Complete a lessons review, track owners/deadlines and update controls and risk assessment.

An emergency security fix can precede a normal product approval when necessary, with recorded authority and follow-up review. It must not introduce a new personal-data purpose without assessment.

Notification templates

Authority notification record

To [verified competent authority], from [lawful controller/representative]. Incident [ID], awareness [timestamp/time zone], initial notification [timestamp]. Description [facts and uncertainties]. Categories and approximate people/records [verified estimate]. Consequences [assessment]. Containment/remediation [actions]. Relevant provider/transfer [details]. Contact [privacy lead]. Further information expected [event/date]. Submission method/reference []. Legal reviewer []. Supplementary notices []. This record must be adapted to current official forms and requirements.

Affected person notice

We identified [safe description] affecting [information categories] during [known period]. We took [actual containment]. The possible effects are [plain explanation]. You can protect yourself by [relevant steps] and contact [verified contact] with reference [ID]. What remains uncertain []. We will update you through [route]. The notice must not reveal another relative's sensitive facts or shift responsibility to the user without basis.

Backup and service recovery

Use off-device protected database and media backups with approved rotation and locations. JSON tree exports are not full media/service backups. Document backup coverage, keys, restoration tools, report/account records and provider dependencies. Verify successful jobs without logging their contents and alert on failed or overdue backups.

Proposed recovery objectives for board approval: no more than 24 hours of unrecoverable authorized data changes and restoration within 24 hours after a declared major outage. These are targets, not achieved service promises. Change them if operational cost or evidence requires; publish only commitments proven sustainable.

Quarterly during operation and before launch, rehearse restoration in a clean isolated environment. Restore matching database/media versions and migrations, apply current deletion/restriction records, verify normalized ancestor indexes, credentials, reports, permissions and media controls, then approve reopening. Ensure the restored system cannot send old recovery mail or reuse expired invitation secrets. Document actual recovery time and losses against the objectives.

Release rollback and device controls

Keep signed release artifacts and migration compatibility records. A rollback must consider schema changes, revoked access, notices and permissions, and idempotent request receipts. Restoring an older app must not grant historical public-tree access or remove a completed deletion. Stage migration/rollback rehearsals on synthetic data before touching real production.

Test physical budget/small/mainstream Android devices, large text, TalkBack, denied/revoked photo permissions, background death, weak networks and upgrade from the previous release. Company laptops/phones need screen locks, supported software, protected storage and controlled file transfer. Avoid personal cloud synchronization of family datasets and signing secrets.

Security audit and continuing evidence

Counsel and the security lead must confirm the applicability, approved auditor route, cadence and reporting obligations under Cameroon's cybersecurity framework. ANTIC publishes guidance on security audits; normal developer testing does not replace a legally required audit. [ANTIC security audit guidance](#)

Maintain evidence of access reviews, vendor controls, key custody, dependency checks, backup jobs, clean restores, incident exercises, fixes and legally required reports. The annual security status report is prepared using the form in document 07 and submitted through the verified route when applicable.

Approval and contact card

Incident lead [name/secure contact/deputy]. Privacy lead []. Counsel []. Manager []. Provider emergency contacts [verified]. Competent authority contacts and channel [counsel verified]. Policy owner []. Budget []. Exercise evidence []. Legal approval []. Board decision/effective date []. Do not place account passwords, signing keys or database credentials on this card.

KKEVO Tech supplier personnel and asset agreements

Document KKT CONTRACT 001 | Version 0.1 | Confidential | Instruments for negotiation and legal review

These instruments support control of Kkevo Family's providers, staff access and software assets. Execute each appropriate agreement with completed parties, scope and schedules after counsel review. Before incorporation, identify the founder who actually contracts; after registration, use a legally valid assumption, assignment or novation. Writing KKEVO Tech on a signature line does not create the company.

Supplier due diligence and approval form

Supplier legal entity []; service []; contract contact []; security/privacy contacts []; controller/processor/independent role per activity []; storage countries []; backups []; remote support locations []; subprocessors []; data categories []; purpose []; retention/deletion []; export and exit capability []; encryption/access evidence []; incident capability []; business continuity []; reuse/training/advertising terms []; transfer permissions []; budget []; conflicts [].

Review original contracts and technical configuration, not only sales claims. Map mail, database, object storage, monitoring and support separately. Identify vendors acting independently for their own billing/security purposes. Evidence []; unresolved issues []; privacy approval []; security approval []; legal approval []; signatory authority []; renewal/exit date []. A vendor without an approved location and deletion route must not receive real family records.

Data processing agreement

Parties and service

This agreement is between [full incorporated controller, address, registration and authorized signatory] and [processor legal entity/address/signatory], effective [date], for [service]. Where the provider has independent processing purposes, list them separately and apply the appropriate notice/contract route. The processor acts on documented instructions for the activities in Schedule A. The commercial service contract is [reference].

Instructions and purpose limits

The processor processes only the agreed data for the authorized service and duration. It must not sell, advertise using, train models on, mine relationships from or repurpose family records. It alerts the controller if an instruction appears unlawful and pauses the affected action while clarification is obtained, without using that pause to preserve unapproved disclosure. Statutory obligations of either party remain intact.

Personnel and security

The processor limits access to trained personnel bound by confidentiality and necessity, uses the safeguards in Schedule B, maintains individual access records and removes access when no longer required. It protects credentials, backups and media, prevents unintended public access, supports data accuracy and availability, and gives evidence sufficient for controller review. Certifications are described accurately with scope/expiry and do not replace service-specific checks.

Locations subprocessors and transfers

Only locations in Schedule C are authorized. The processor must not add a storage, backup or remote-access country or subprocessor without the agreed prior review/authorization process and required legal permissions. It supplies subprocessor identities, functions and safeguards. The controller's approval of a contract is not a substitute for a required authority permission. A subprocessor receives equivalent obligations, and the processor remains accountable as required by law and contract.

Breaches and urgent assistance

The processor informs [controller emergency contact] immediately upon awareness of a relevant personal-data breach, provides available facts and continuing updates, preserves appropriate evidence and takes prompt containment actions. It assists authority/data-subject notification and must not await a completed investigation before informing the controller. The controller and processor each fulfil their own legally applicable duties; the contract does not authorize either to withhold a required notification.

Rights requests and deletion

The processor forwards relevant requests immediately, uses only proportionate identity checks under agreed instructions, and assists access, correction, restriction, erasure and portability. It implements scoped controller instructions without unnecessary delay and supplies verifiable outcome evidence. It must not keep a family copy merely because a service account closes. Shared records and lawful holds are governed by documented category-specific instructions.

Evidence audits and regulatory cooperation

The processor maintains appropriate service/security records and supplies evidence for risk assessments, lawful authorization, audit and regulator requests. Audit arrangements [notice, frequency, independent reports, access and costs] must not prevent urgent breach review or competent authority access. Logs and audit outputs avoid unnecessary personal content. Findings have owners, severity and remediation dates.

Return deletion and exit

At [termination or instruction], the processor securely returns approved data in [format] and erases the agreed active copies, credentials and caches. It identifies any legally necessary retention with scope, reason and expiry; isolates retained information; and reports backup treatment. It provides a signed completion record and prevents restoration from reactivating erased records. Exit assistance [scope/cost] and migration validation [method] are completed before ending essential service access.

Legal demands and liability

The processor reviews legal demands, informs the controller when lawful and limits disclosure to a valid necessary scope. Liability, allocation of costs, insurance, dispute route and governing law are [counsel-reviewed clauses consistent with mandatory responsibilities]. No blanket waiver removes statutory duties or personal-data rights. Conflicting commercial terms are reconciled before signature.

Schedules and signatures

Schedule A: operations [processing register IDs], subjects [users/non-users/minors/deceased as lawfully permitted], exact fields [], purposes [], duration [], deletion instructions [], rights contacts [].

Schedule B: encryption/key custody [], access/MFA [], logging [], media isolation [], vulnerability management [], backup/restore [], incident contacts [], staff checks/training [], evidence references [].

Schedule C: provider and subprocessor entities [], functions [], country for active storage/backup/remote access [], legal permission or authorization reference [], change notification and approval [].

Controller signature [name/title/date]. Processor signature [name/title/date]. Legal review []. All schedules completed []. No real-data onboarding until permissions and configuration are verified.

Provider exit and deletion confirmation

Provider []. Service/contract []. Instruction received []. Categories and systems []. Active deletion/return completed [date/method]. Subprocessor confirmations []. Backup handling and final expiry []. Required retained data/reason/access limit/review []. Prevention of reintroduction []. Exceptions/outstanding work []. Authorized provider signature []. Controller verification []. Do not accept an unqualified certificate when backups or copies remain.

Personnel confidentiality and acceptable access agreement

Parties: [company or identified founder before formation] and [employee/contractor/adviser]. Role []; services/employment contract [reference]; effective date []. The person receives only necessary access to code, business records, credentials and personal data. They use approved devices/accounts and follow documented processing instructions, security policy and lawful reporting requirements.

Confidential information includes family content, reports, account details, private source code, signing/secrets and internal financial/legal records. The person must not browse relatives' records out of curiosity, share family exports, move copies to personal storage, use information for marketing/research/training, or disclose incident material outside the approved response. They report suspected misuse immediately and cooperate with requests and investigations.

Access is individual, limited, reviewed and revoked on departure or scope change. Return company assets and erase unauthorized copies, retaining only what law requires through the agreed confidential route. Continuing confidentiality covers protected information for as long as legally justified; it does not prevent lawful whistleblowing, reporting to competent authorities or exercising mandatory rights. Employment terms and enforceability must be adapted to local law.

Training completed [modules/date]; granted access [systems/expiry]; supervisor []; emergency contact []; device rules acknowledged []; permitted independent records []. Person signature []. Company signatory []. Offboarding completion [access revocation, assets, copy disposal, outstanding obligations].

Founder and contributor intellectual property assignment

Assignor [legal identity] and assignee [registered company] agree to transfer the specified rights in Schedule IP on [date], for consideration [lawfully agreed amount/arrangement]. Before the company exists, this is a proposed instrument only; counsel determines the proper formation contribution or later assignment route. Identify all co-authors and prior obligations.

Schedule IP lists each repository/commit range, software module, design, documentation, brand asset, domain or account, creation dates, author, existing owner, third-party material, license, territory, transferable rights, duration and exclusions. The assignor warrants only the rights they genuinely control and discloses restrictions and co-ownership. The transfer covers the specifically identified transferable economic rights necessary to reproduce, adapt, distribute and operate the assets, within the legally valid scope settled by counsel. Moral rights and other non-transferable rights are respected.

Third-party and open-source components remain under their licenses. Compile license notices and obligations, including distribution/source requirements when applicable. Do not assume a purchased font, stock photo, generated graphic or cultural symbol is unrestricted or exclusive. Company and Kkevo Family names/logos require their own clearance and protection assessment.

This assignment does not transfer ownership of users' personal data or contributors' family photographs. Their rights follow permissions and terms specific to those records. Account and domain handover uses secure custody changes, individual access and recovery checks; never write passwords

in this instrument. Acceptance evidence []; assignor signature []; company signatory []; counsel review []; consideration evidence [].

Alternative asset license instrument

If assignment is not appropriate, licensor [] grants the registered company [exclusive/non-exclusive] rights to specified assets [schedule], for [territory/duration/purpose], with [fees], permitted modifications/distribution [], support [], source access [], sublicensing [], termination [], continuity/exit rights [] and third-party exclusions []. Counsel must complete and validate the terms; do not treat a vague permission to use a repository as ownership.

Related controller and family administrator review

Counsel must determine whether any external organization, partner or administrator jointly determines processing purposes/means. A tree role does not automatically establish a joint-controller relationship. If joint control exists, prepare a separate arrangement covering responsibilities, notices, rights contact, incident handling, permission evidence and transfers, with an appropriate public summary. Do not force a household relative to sign a processor contract without analysis.

Board procurement and signature record

Contract ID []; exact version []; parties/capacity []; schedules completed []; legal route []; data/transfer approval []; security review []; budget/conflict review []; authorized signatory []; execution date []; effective/renewal/termination []; custody location []; outstanding conditions []. Board/manager decision []. A signed contract is not evidence that promised controls work; verify before activation.

KKEVO Tech board registers and Kkevo Family release acceptance

Document KKT BOARD 001 | Version 0.1 | Confidential | Reusable decision and evidence records

The secretary maintains these forms as controlled records. Completed forms support registration, operations and release decisions; an empty checklist does not prove compliance. Use case references and aggregate measures in board circulation. Detailed family records, identity proofs, credentials and forensic evidence belong in separate restricted storage.

Document approval and change register

Document	Owner and review	Approval and effective date	Evidence or outstanding condition
00 Formation and board plan	Founders and counsel	[Decision/date]	[]
01 Registration instruments	Founders and counsel	[Signed version/date]	[]
02 Data policy and assessment	Privacy lead and counsel	[Decision/date]	[]
03 Notices and terms	Privacy/legal/language reviewers	[Publication version/date]	[]
04 Rights and content procedures	Privacy/support lead	[Decision/date]	[]
05 Security and recovery	Security/privacy/legal leads	[Decision/date]	[]
06 Contracts and assets	Manager/legal/procurement	[Executed instruments]	[]
07 Evidence and release records	Secretary/manager	[Decision/date]	[]

For every change record trigger, affected purposes/data/territories, legal review, operational impact, notice/consent changes, tested implementation, approving authority, version/effective date and superseded location. Retain adopted versions and acceptance evidence under the approved schedule.

Company legal and ownership register

Legal name/form []; registration extract and verified number []; tax identifier/evidence []; registered office []; founder/beneficial-owner evidence held at [restricted location]; manager/authority []; capital/share register []; fiscal calendar []; accountant []; employer obligations []; bank authority []; name/trademark applications []; annual filings and review tasks [].

Product assets: code repositories []; copyright/contributor instruments []; third-party licenses []; logos and name rights []; domains []; company service accounts []; Play organization account []; signing key custody/recovery []; approved pre-incorporation commitments []. Do not place secrets on this register.

Processing permission and transfer register

For each operation P01 to P10: exact scope/version []; counsel determination []; applicable official procedure []; required form/channel []; submission date/receipt []; authorization or other lawful outcome []; conditions/expiry []; permission-evidence register []; retention code []; responsible lead []; unresolved restrictions []. Processing not cleared for real data remains excluded from production.

For each recipient/transfer: legal entity []; operation/data []; active storage [country]; backup [country]; remote access [country]; subprocessor []; contractual instrument []; required authority outcome []; actual configuration evidence []; exit/deletion method []; approval date/reviewer []; change/renewal []. Consent or a supplier's marketing certificate alone is not sufficient clearance.

Country entry assessment

Territory	Proposed status	Review required before activation
Cameroon	First launch recommendation subject to conditions	Formation, permissions, data model, providers, support and release evidence
Each selected Central African country	No launch approval yet	Named country, local law/counsel, territory scope, transfers, notices, language/support and incidents
Other countries or diaspora access	Not assessed by this pack	Scope of service/targeting, local requirements and overseas access review

Record country []; accountable local legal review []; controller/representative duties []; registrations/permissions []; child/deceased/sensitive rules []; response/incident requirements []; hosting/access []; notice languages []; operational readiness []; distribution settings []; board decision/conditions []. Common regional business-law arrangements do not automatically harmonize privacy obligations.

Risk and action register

ID	Risk or condition	Accountable owner	Closure evidence
A01	Company not registered	Formation coordinator	Authentic registration and manager authority
A02	Living/minor/deceased permissions unresolved	Privacy lead and counsel	Written lawful model and implemented evidence
A03	Matching/interconnection permissions unresolved	Privacy lead and counsel	Classification, required permissions and controls
A04	Real hosting/mail/support absent	Operations manager	External signed-app proof and staffed channels
A05	Actual account erasure incomplete	Engineering/privacy	Full lifecycle and restore verification
A06	Provider/transfer controls absent	Procurement/privacy	Executed contracts and approved locations

ID	Risk or condition	Accountable owner	Closure evidence
A07	Signed physical-device pilot unproven	Release lead	Acceptance and observed consenting-family results
A08	Off-device recovery not rehearsed	Security lead	Clean restore and deletion suppression evidence

Add initial/residual severity, target event/date, budget, decision reference, dependencies and verification reviewer to each live record. Do not close a legal blocker solely because engineering tests pass. Record risk acceptance only where the activity is lawful and the authorized body understands the remaining operational risk.

Access incident and rights registers

Access entry: person/role []; systems/purpose []; approved scope []; manager []; training/agreement []; grant/expiry []; last review []; revocation []; emergency access/review [].

Incident entry: ID []; awareness []; severity []; affected categories/counts []; lead []; containment []; counsel decision []; authority and subject notices [references/times]; recovery []; corrective actions []; review/closure []. Avoid names and story text in the board summary.

Rights/content entry: case ID []; received []; type []; urgency []; verified capacity []; owner []; required timing []; result []; provider/backup follow-up []; review/appeal []; closure evidence []. Detailed evidence is stored separately with restricted access.

Monthly board report

Period []; company formation progress []; spending versus authorization []; cash and recurring commitments []; major legal/permission issues []; release stage []; service incidents [aggregate]; access reviews [completion]; backups/restores [result]; rights/report cases [received/completed/overdue]; provider changes []; training []; top risks []; decisions requested [].

Include unresolved subject-rights timing, child-safety concerns and authorization gaps as explicit exceptions. Report local automated test results separately from production outcomes. Avoid readiness percentages that obscure a blocking requirement.

Annual security and data governance report template

Reporting entity []; year []; lawful signatory []; scope []; processing and provider changes []; authority conditions []; control inventory and effectiveness []; staff access/training []; incidents/notifications [aggregate]; rights cases [aggregate]; backup/restore results []; audit findings and actions []; remaining risks []; permissions/retention review []; plan and budget [].

Counsel confirms required filing recipient, content, form and timing. Submission reference []; signature []; retained copy [restricted location]. Preparing a board report does not automatically fulfil a statutory submission.

Release acceptance conditions

Company and legal clearance

The company exists with verified particulars and a lawful signatory. Product assets and accounts are under valid company custody. Counsel has approved the data model, including non-user, child, deceased and matching treatment. Required permissions and vendor/transfer conditions are

evidenced. User notices are complete, accurate, consistent in English/French and accessible on real public URLs. Proposed policies have adoption records.

Existing workflow completion

Demonstrate account creation/verification/recovery/password changes; private family creation; correct profile/relative/relationship editing with conflict recovery; controlled invitations/suggestions/approvals/revocations; portraits/stories; native imports/exports and uncertain retries; reports and human response; and actual deletion across viewer/editor/owner/sole-owner and non-user cases. Match the API, app and migrations. Do not claim operational completion from a pending deletion request.

The current evidence baseline is 103 PostgreSQL tests, 79 mobile tests and seven native emulator journeys, recorded in PRODUCTION_GAP_CLOSURE_REVIEW.md. These results concern the isolated local audit app. Revalidate changed workflows and obtain evidence for the signed production configuration; do not reuse emulator results as proof of physical-device, email-provider or production deployment behavior.

Operations and release delivery

Production HTTPS, database, private media, secrets and actual mail are configured and tested from outside the development PC. Support/privacy contacts are staffed. Incident handling and notification channels are rehearsed. Off-device database/media restoration respects current deletions. Monitoring excludes private payloads. Signed package, store account, privacy/deletion links, audience/content rating and Data Safety disclosures match actual app and SDK behavior. Provide synthetic reviewer access that exposes no real families.

Pilot and Android acceptance

Use consenting coordinators and relatives under approved processing permissions; a small pilot is still real processing. Test budget/small/mainstream physical devices, accessibility, revoked permissions, process death, poor connections and upgrade paths. Exercise family scale agreed with the board, such as 100/500/2,000-person datasets using synthetic content before real pilot claims. Record measured limits, blocked journeys, participant feedback and fixes. No app-store or legal approval is implied by pilot participation.

Final go or defer record

Release version/build []; API/migration version []; territories []; decision body and authority []; company verification []; legal opinion and permissions []; policy versions []; supplier approvals []; signed/device/pilot evidence []; deletion and restore exercise []; support roster []; budget []; unresolved issues and exclusions [].

Decision [Approve staged release / Defer / Approve only synthetic testing]. Conditions []. Rollout scope and checkpoints []. Pause/rollback triggers []. Decision expiry/review []. Signatures: manager []; privacy lead []; security lead []; release lead []; authorized chair/shareholder body []. Counsel acknowledgment [].

First board meeting agenda and minutes

1. Confirm founding participants, authority, conflicts and the fact that incorporation has not occurred.
2. Select legal-form assessment and approve formation budget/representative.
3. Review the lawful family-data model and outstanding permissions.
4. Review asset ownership, providers, role appointments and staffing.
5. Adopt or return each document with explicit amendments and conditions.
6. Approve next actions and maintain public launch deferral until acceptance.

Meeting [date/location or remote arrangements]; present []; notice/quorum []; declared conflicts []; agenda materials/version []; discussion summary []; resolution IDs, votes and conditions []; owners/deadlines []; next meeting []; chair and secretary signatures []. Store adopted copies in the controlled company record repository.

Immediate execution checklist

Founders supply legal particulars and asset provenance. Counsel reviews legal form, statutes and data model. The formation coordinator obtains current CFCE forms and quotes. The board assigns roles and funds operations. Privacy/procurement complete permissions and provider locations. Engineering implements only the approved existing-workflow obligations. Operators rehearse rights, incidents and recovery. The authorized body signs the release decision only when the evidence exists.
